Value Proposition

Mid-level developer who **doubles team output** and **boosts traffic +25%** by shipping full-stack, SEO-driven web apps. Excels in remote, async environments—owning features end-to-end from design to cloud deployment.

Core Strengths & Differentiators

- **Impact Delivery:** 100% lift in dev productivity via custom Remix tools
 - **SEO & Growth:** +25% organic traffic from optimized e-commerce sites
 - **API Mastery:** Seamless integrations with Shopify, eBay, Google Shopping
 - **Cloud & Scale:** Legacy → AWS (EC2, RDS) migrations for high availability
 - **Team Leadership:** Mentored and managed peers to accelerate feature roll-out
 - **Remote-Ready:** Asynchronous communication, Git-first workflows, CI/CD
-

Professional Experience

Senior Full-Stack Developer · Warehouse Wireless (Remote-Friendly)

Jan 2022 – Present

- **System Complexity:** Maintained and developed across **10+ production databases**, overseeing schema changes and data relationships across a system of **1,300+ tables** (legacy + modern).
- **Architecture Ownership:** Designed and extended schema in a new domain-specific database (~50 tables), owning key relationships and developer-facing APIs used across teams.

- **Productivity Tooling:** Built a modular Remix dashboard powering internal tools across a system of **1,300+ relational tables**.
- **E-Commerce Growth:** Architected SEO-optimized landing pages integrated into a high-traffic ecommerce stack, driving a **+25% increase** in new user sessions.
- **API Ecosystem:** Integrated 5+ third-party APIs (Shopify, eBay, Google, Paypal, FedEx) to automate order and inventory flows—**eliminating 10+ hours/week** of manual ops work.
- **Cloud Migration:** Led migration of monolithic services to AWS EC2 + RDS across multiple production databases—**boosted uptime to 99.9%**.
- **Team Enablement:** Mentored a junior dev through full SDLC on internal tooling—resulted in **3+ independently shipped features** and increased team velocity.

Floor Manager · Warehouse Wireless

May 2016 – Present

- Scaled production team from 5 → 20 employees, boosting throughput **+50%**.
 - Overhauled hiring and onboarding, yielding a 0% turnover rate in 2023.
 - Implemented KPI dashboards that tracked daily quotas, achieving 12 consecutive “on-target” months.
-

SaaS Starter

[View on GitHub →](#)

A no-frills SaaS starter kit that shows how I’d architect a production-ready, multi-tenant app with organizations, auth, and billing. It’s minimal, but functional—clone it, test it, break it.

What’s Included:

- Auth with email/password + Google SSO
- Org-based RBAC with invites
- Custom onboarding flows
- Session handling (with IP enrichment)
- Billing-ready (Stripe)
- Built with Next.js, Tailwind, Prisma, and Shadcn

I’ve leaned into practical design choices—dates instead of booleans, recursive onboarding, and a simple auth strategy that doesn’t rely on third-party abstractions. Auth isn’t magic, and you don’t need to overcomplicate it.

This starter focuses on flexibility, clarity, and scale. It's not polished, but it's battle-ready.

Education & Certifications

- **Harvard CS50** – Introduction to CS & Programming
- **Forest HS, Ocala FL** – Engineering & Manufacturing Institute (AutoCAD cert, AP awards)
